

Matthew Angle

Chambersburg, PA 17201
matthew@matthewjangle.com
717-372-6021

Dynamic software engineer specializing in integrating software with real-world machinery, leveraging a robust background in the automotive and manufacturing sectors. Expertise includes developing automation, data acquisition, and analysis tools that enhance functionality in test cells, laboratories, and factory settings.

Committed to simplifying complex physical systems through reliable software solutions and insightful data management. Passionate about roles where software empowers engineering initiatives, particularly in test systems, control software, industrial IoT, and data-intensive R&D tools across the automotive, manufacturing, and aerospace industries.

Top Skills

- C#
- Python
- SQL
- Linux
- IIot (Industrial Internet of Things)
- Manufacturing Data Engineering
- Data Acquisition Systems
- Test Automation

Work History

● Experienced Software Automation Engineer

Volvo Group, Hagerstown, Maryland, United States | March 2024 - January 2026

- Worked on Morphee-based engine test cell automation systems supporting R&D, performance and regulatory certification testing. Design and validate automated test sequences, integrate instrumentation and data acquisition hardware, and support engineers during test execution and troubleshooting in compliance-driven environments.
- Designed and implemented an application to convert Vision .rec files into Parquet format for ingestion into Volvo's global data pipeline. Built a background service to monitor incoming test data and automate transformation and validation so results are available quickly to engineering and analytics teams.

Tools and Tech Used: C#, Python, SQL, Morphee, git, Vision, CAN/CAN-FD, WPF, ASP.net

● Software Innovation Engineer

Fives, Hagerstown, Maryland, United States | January 2023 - March 2024

- Led data engineering effort focused on collecting, processing, and storing industrial IoT data from advanced manufacturing equipment. Worked on cloud infrastructure planning, security considerations, and data visualization.
- Collaborated on data science project with a large automotive manufacturer to analyze relationships between machine signals and in-process metrology data. Implemented robust data acquisition strategies on factory equipment and supported data processing and analysis.

Tools and Tech Used: C#, Python, Grafana, PostgreSQL, Linux, AWS, Azure, OPC-UA, MQTT, R, git, C, WPF

● Software Engineer

Fives, Hagerstown, Maryland, United States | June 2021 - January 2023

- Developed applications for manufacturing simulation, test data analysis, and machine log processing. Built tools to help engineers understand system behavior across repeated cycles and optimize process parameters. Built internal applications integrating databases and ERP data for use in capacity planning.

Tools and Tech Used: C#, Python, Linux, git, WPF, SQL

● Software Engineer Intern

The Beistle Company | February 2021 - May 2021

- Developed internal tools used in warehouse management system.
- Tools and Tech Used: C#, SQL, Windows Forms

Interests

- Pizza
- Software Defined Radio
- Mountain Biking / Cycling

Education

- Bachelor of Science - BS in Software Engineering
Shippensburg University of Pennsylvania, Shippensburg, PA
- Bachelor of Arts (B.A.) in Philosophy
Temple University, Philadelphia, PA

Volunteer Work

- South Central STEM Collective - Board Member - 2023-2026

Projects

DoltHub Presidential Election Data Bounty : Dec 2020 - Dec 2020

- Sourced presidential election data at a precinct level from state and county websites. Sourced, transformed and inserted data into collaborative database. Third in overall contributions. Received \$2,355 data bounty reward.
- Project Repository - <https://www.dolthub.com/repositories/dolthub/us-president-precinct-results>

Jairus of All - Assassin's Creed Hidden Blade Code : Sep 2022 - Oct 2022

- Assisted writing code used to control Blade in extended and retracted states for an Assassin's Creed Hidden Blade replica for the Youtube Creator Jairus of All. Featured video received 200,000 views.
- Project Video - <https://www.youtube.com/watch?v=Zlqxc9JPat8>
